Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                    Gaps
                                                                                 A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, Tb38-1. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins BSAT-6, are useful in vaccines, preferably when formulated with a mon-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).
                           New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention or treatment of tuberculosis, also for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                        immunogen; vaccine; tuberculosis; non specific adjuvant;

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen. This immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Immunogenic Mycobacterium tuberculosis polypeptide(s) and {\rm DNA.-} used to develop products for the detection of M. tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the Mycobacterium tuberculosis antigen
Tb38-1. The invention provides fusion proteins (see AAY32059-71)
containing at least 2 M. tuberculosis antigens such as Tb38-1, e.g.
Tb7-2 (see AAY32063) and a Tb49-Tb38-1 fusion. The new fusion
proteins are useful as vaccines for preventing tuberculosis
(claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New fusion proteins useful for diagnosis, prevention and treatment tuberculosis -
                                                                                                                                                                                                                                                                                                                                                                  Tuberculosis, antigen, fusion protein; Tb38-1; diagnosis; therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This is an antigenic portion of Mycobacterium tuberculosis antigen TD38-1. A DNA sequence (see AAV44384) coding for antigen TD38-1 was isolated from a M. tuberculosis strain H37Rv expression library using sera from patients having pulmonary or pleural tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW6421-W64379) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                    The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis—immune subjects. AAX192949 to AAX19460 and AAX39033 to AAX39225 are used in the exemplification of the present invention.

This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 IDAATLAQEAGNFERISGDLKTQIDQVESTAGSLQGQWRGAAGTAAQAAVVRFQEAANKQ

                                                                                                                                                                                                                                                                                                                                                                                         à
                                                                                                                                                                                                                                                                                                                                                                                                              d
                                                                                                                 The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide. The recombinant nucleic acid comprises a heterologous polynucleotide sequence encoding an antigen or an antigenic fragment from Mycobacterium sp. and a Leishmania polynucleotide sequence encoding a polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, Leff, MIS, and 6H polynucleotides. Sequences of the invention are useful as vaccines to eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is My tuberculosis TD38-1 antigenic protein. TD38-1 is also referred to
                                                                                                                                                                                                                                                                                                                                                                         1 TDAATLAQEAGNFERISGDLKTQIDQVESTAGSLQGQWRCAAGTAAQAAVVRFQEAANKQ 60
                                                                                                                                                                                                                                                                                                                                                                                         New recombinant nucleic acid molecule comprising a Leishmania TSA, LeIF, MIS or 6H polymucleotide, useful as vaccine to elicit protective immunity against pathogenic microorganisms e.g. Leishmania and Mycobacterium tuberculosis

The present invention relates to fusion proteins containing at least two Mycobacterium species antigens, nuclectides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to nucleic acids encoding fusion proteins that include two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with tuberculosis and methods for their use in diagnosis, prevention and treatment of tuberculosis infection. Sequences of the invention are useful for eliciting an immune response in a mammal, e.g., human, immunised with BCG. They are useful in the diagnosis, treatment and prevention of Mycobacterium infection. The fusion proteins and the polynucleotides are useful as diagnostic tools in patients infected with Mycobacterium, in vitro and in vivo assays for detecting humoral antibodies or cell-mediated immunity against M. tuberculosis, for the immunogens to generate or elicit a protective immune response in a patient and for raising anti-M. tuberculosis and non-manning patient and for raising anti-M. tuberculosis antibodies in a non-human patient and for raising anti-M. tuberculosis antibodies in a non-human patient and for raising anti-M. tuberculosis antibodies in a non-human patient and for raising anti-M. tuberculosis antibodies in a non-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for intradermal skin test. The present sequence is Mycobacterium species (DAS8-1 (Mtbl1; 38-1) protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diagnostic agents

                                                                                                                                                                                                                                                         65
                                                                                                                                                                                                                                                 This polypeptide comprises a partial sequence of Mycobacterium tuberculosis antigen Tb38-IN. It is encoded by genomic DhA isolated form a M. tuberculosis strain H37Rv genomic library using a probe derived from clone Tb38-I (see AAV44384). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW6429-W6479) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic

  to develop products for the detection of M.\ tuberculosis infection and for diagnosis, treatment and prevention of tuberculosis
                                                                This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a me for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or be used for the diagnosis of tuberculosis.
                                                                                                                                                                                                          o,

Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytckine secretion by, T. B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AZI2949 to AAZI3460 and AAY39083 to AAX39225 are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences for members of the esat-6 gene family from Mycobacterium tuberculosis. Th proteins include RV0287, RV1036c, RV3346c, RV2346c, RV2554c, RV2654c, RV3090c, RV3990c, RV3905c. These can be used to produce vaccines against, and in the diagnosis of, tuberculosis (TB) infection. The present sequence is on

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in biological sample by detecting antibodies which bind with the polypeptides, and received as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                           Antigen; diagnosis; detection; infection; antibody; immunisation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polypeptide comprising antigenic portions of M. tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                  The present sequence is that of the Mycobacterium tuberculosis MTBM protein. This is 1.0f 8 proteins, i.e. MTBM1-8 (see AAA99035-42) identified as being present in the genome of Kee AAA99035-42) identified as being present in the genome of Mycobacterium bovis. MTBM1-8 represent troom the genome of the BGG strain of Mycobacterium bovis. W. tuberculosis and BGG and, in particular, for diagnostic methods which discriminate between exposure of a subject to M. tuberculosis and vaccination with BGG. The invention features these MTBM polypeptides, functional fragments of them, DNA encoding them, vectors, transformed cells, and diagnostic, therapeutic, and methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                     Novel polypeptide encoded by open reading frames present in Mycobacterium tuberculosis genome and not by the BCG strain of M. bovis, useful as vaccine and for diagnosing tuberculosis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein Rv3905c - Mycobacterium tuberculosis (strain H37RV)
C;Species: Mycobacterium tuberculosis
C;Decies: Mycobacterium tuberculosis
C;Date: 17-Jul-1998 #sequence_revision 17-Jul-1998 #text_change 22-Oct-1999
C;Accession: B70600
R;Cole, S.T.; Brosch, R.; Perkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S.; Connor, R.; Davies, R.; Devlin, K.; Feltwell, T.; Gentles, S.; Hamlin, N.; Holroyd, S. Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skelton, S.; Squares, S.
Nature 393, 537-54, 1998
A;Authors: Sqares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.
A;Title: Deciphering the biology of Mycobacterium tuberculosis from the complete genome A;Accession: B70600
A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Moccule type: DMA
A;Residues: 1-103 <CCL-
A;Cross-references: GB:Z94121; GB:All23456; NID:g3261736; PIDN:CAB08096.1; PID:e312272; A;Genetics:

-:- FUNCTION: WOOLD MICRORIBARILIAR KERATIN.
-:- MISCELLANBOUS: THERE ARE TWO TYPES OF CYTOSKELETAL AND
MICROFIBRILIAR KERATIN, I AND II (40-55 AND 56-70 KILODALTONS,
RESPECTIVELY: AT LEAST ONE TYPE OF CYTOSKELETAL KERATIN IS
PRESENT IN ALL VERYEBRATE BPTHELIAL CELLS.
-:- MISCELLANGOUS: THE LOW-GULFUR, PROTEINS, DERIVED FROM THE
MISCELLANGOUS: THE LOW-GULFUR, PROTEINS, DERIVED FROM THE
FAMILIES, BACH CONSISTING OF 4 HOMOLOGOUS SUBUNITS: THE TYPE I
COMPONENTS (8C-1, 8C-2, 8A & 8B) AND THE TYPE II COMPONENTS (5,
7A, 7B, AND 7C).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=93064711; PubMed=1437155; Mitchbell P.J., Cooper C.S.; "The human tyr gene encodes a protein of 2094 amino acids that has extensive colled-coil regions and an acidic C-terminal domain.";
